

Restaurant Stripe Credit Card Integration

When customers order products from your business on your RocklandEats.com website, they pay for their purchases on the site with a credit card. The transaction is handled by Stripe, one of the top internet credit card processors.

Orders are sent to your restaurant only when the credit card transaction is successful.

For payment processing of successful orders, we need to connect your website to Stripe. Stripe is easy to set up and has a special “Developer” account that allows RocklandEats.com to set up the secure connection without needing access to any of your private banking information.

To set up your credit card processing account, please follow these simple steps:

1. Go to <https://stripe.com> and follow the directions to set up a new account. (if you already have a Stripe account, go to step 3).
2. Complete the information to set up your account. You'll need your business information, tax id number and bank account information.
3. After your account is set up, go to Settings > Team members > New User and add the email mike@meshbiz.com as a ‘Developer’. This will allow us to connect your website with your Stripe account.

If you have questions about the process, you can ask Stripe customer service for help or call RocklandEats.com at 845-694-7734.

Thanks. We look forward to working with you.
